

Swift Box from

Cheep Nestboxes

Guidelines

Thank you for choosing a Cheep Nestboxes Swift Nest Box. These guidelines will help you position your nest box in the best possible location for maximum usage potential and ensure the safety and security of any occupants.

Locating Your Box

Due to modern building practices and materials, swifts are finding it increasingly difficult to locate suitable nesting sites in our urban environment. Swifts have, for centuries, nested in holes and crevices in our buildings, but these are rapidly disappearing and they replace quickly with artificial nest boxes if the current decline in Swift population numbers is to be addressed.

Your box should be placed under the eaves of a tall building (a MINIMUM of 5 meters above ground level) away from any potential obstructions such as climbing plants and telephone wires. A location well shaded from direct sunlight should be selected.

Erecting Your Box

The box should be secured in place using weatherproof brackets or fixings (not supplied by Cheep Nestboxes).

Your Safety

Please work safely and if possible not alone whilst erecting your nest box, and carry out a reconnaissance visit to assess any potential hazards before undertaking the work.

We hope your Cheep Nestboxes Swift Box brings you pleasure and is used successfully for many years to come.

Please do not hesitate to contact us if you have any comments or questions about our product and please do let us know if it is successfully used.

Thank you again for your purchase from Cheep Nestboxes and we look forward to seeing you again.

Kindest regards,

Cheep Nestboxes

It's not just the birds that are going 'cheep'
